Comprehensive Scientific Equipment Management

Sea Tusker Ship Management Pvt Ltd has formalized a groundbreaking Operations & Maintenance Agreement for M.V. HERAN 110, operating under St. Kitts & Nevis Flag. This strategic partnership represents our commitment to advancing maritime research capabilities through professional vessel management.

Our dedicated team of qualified survey engineers provides 24/7 operational support for critical scientific instrumentation, ensuring seamless data collection and equipment reliability throughout extended research missions.

Contract Highlights

- International framework compliance
- Round-the-clock engineering support
- Full HSE standards adherence
- Structured reporting protocols

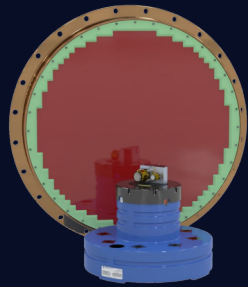

Advanced Scientific Systems Under Management

Our operational scope encompasses comprehensive management of state-of-the-art oceanographic and marine research equipment, supported by systematic preventive maintenance protocols and expert technical oversight.

Single Beam Echo Sounder

Precision bathymetric mapping and seabed profiling with continuous depth monitoring

Portable ADCP Systems

Real-time water current velocity measurements and oceanographic data acquisition

Bongo Net & U-CTD

Marine biological sampling and conductivity-temperature-depth profiling capabilities

Sediment Grab Systems

Seabed sampling and geological survey operations with quality assurance protocols
